Foreword

Pakistan is an emerging economy with a very high population increase rate, in addition to that there has been a trend of rapid urbanization which has led to congestion in cities. The real estate values have skyrocketed leaving the middleclass looking for cheaper options. Realizing the opportunity, there has been an outburst in the construction of high rise buildings to mitigate the high cost of land. This trend has caused a huge increase in the demands of elevators which is expected to only grow as time passes by. We are in the forefront of leading the elevator market in Pakistan and are actively involved in satisfying this verical transportation need of our valued clients by providing, installing and maintaining, distinctive high quality, state-of-the-art FujiHD elevators and escalators.

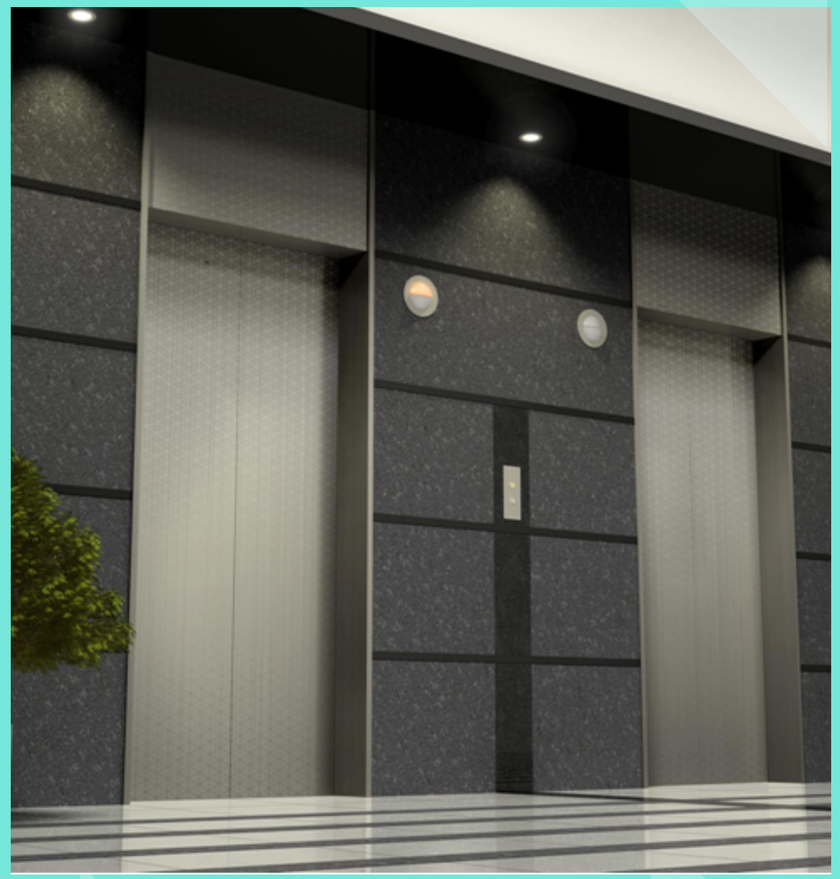
With a highly dedicated team of skilled professionals and network of branch offices throughout Pakistan, we shall continue to forge lasting partnership with our valued clients and business partners to ensure complete statisfaction.

About Us

Codka Engineering is involved in the supply, installation and maintenance of Elevators, Escalators and Moving Walks. Justifying the mantle of being the undisputed leaders, we are actively participating in the infrastructure development of Pakistan.

With the head office in Lahore, we have established a network of branch offices in Karachi and Islamabad. Besides being committed to increase our market share in Pakistan, we also operate successfully in Saudi Arabia. With a commitment to provide vertical transportation with the highest reliability and safety standards, we share the most innovative ideas with our clients. Our services further extends to providing free technical expertise and consultation on all aspects of elevators and escalators designing, by using the latest technical information and tools like traffic analysis, Hoist-way and Machine room designing.

Our people are our greatest asset and hence we attach as much importance to their development as of technology. Our position of strength has been attained by our focus on technological advancement through R&D by our principals FujiHD and Larrson Elevator that results in continously evolving products with ever improving quality.



Products

Our products are supplied by our Principals Fuji Corporation, which is among a few top companies worldwide striving to revolutionize peoples life styles. With a commitment towards providing startling quality, Fuji has risen to be considered as an icon of reliability and established itself as an indisputable leader in all essential equipment. Fuji elevators and escalators are manufactured using reliable state of the art technology and offer maximum comfort and safety.

Elevators

Passenger Elevators : The new improved machine room and machine room less elevators offer greater ride comfort, freedom of layout and universal design for low and medium rise buildings.

Observation Elevators: A complete new experience of seeing the world through elevators. Wide range of models are available that adds beauty to the building design as well as attract passers by to the building in which they are installed

Hospital Bed Elevators: Models specially made for hospitals application, these elevators are designed to provide safe and convenient transportation. An optimum mix of features ensures efficient elevator operation to meet every hospital need, from transporting patients in beds to moving medical equipment.

Freight Elevators: Leading edge freight elevators that enhance material-handling capacity.

Escalators

Smooth, safe, swift and comfortable to meet modern pedestrian traffic requirements. Moving walks are beigh increasingly used not only at train stations, airports and malls but also at tourist attractions and in major shopping malls.

Dumbwaiters

Suited for hotels, private villas and hospitals to carry light duty loads available.

Moving Walks

Our escalators offers aesthetic elegance and flexbility along with a host of safety oriented features, customer friendly designs and value added functions to deliver utmost performance.

Gen Set

Specialized in the fields of Generator Sale, Installation and Maintenance catering to all your power generation need. We provide innovative and cost effective alternator power solutions in Pakistan by supplying Diesel Generators. Our philosophy is to provide complete solution with customized services and warranty.

Auto Glass Door

The range of Automatic Sliding Glass Doors, is the integral solution for access to your building.

Technical Expertise

Project Management

Codka Engineering, with a team of technocrats has the capability to plan projects and execute them to the highest international standards. With a well trained work force of engineers and technicians, we are in a position to complete even huge orders in a relatively short time.

Quality Assurance

Codka Engineering believes it is not only important to provide quality equipment but also to provide quality installation and maintenance. Our Quality Assurance Plan includes an "intensive maintenance program" to ensure a trouble free performance in the long run. Further, Field Quality Assurance (FQA) engineers from our works frequently visit sites to assist during installation, testing and commissioning, and to assess the quality of our installation and maint.

Technical Expertise

Installation

Elevator ride quality is only dependent on the product quality but also on the installation quality. Our Engineers and technicians are trained on the latest technologies for quality installation. We strictly follow international quality standards during installation. The use of high precision and specialized tools, whose highly accurate response and analysis capabilities allows for rapid identification of problems; enables us to take immediate corrective measures.

Maintenance

The life cycle of a product is determined by the quality and frequency of maintenance. Using high precision tools during maintenance, we makes the elevator and escalators operations more reliable, durable and most of all "trouble-free". The high quality of preventive maintenance results in longer life of the units with minimum breakdowns thus ensuring the safety of the passengers at all times. The entrapment of the people in our elevators is negligible, justifying the reliability.

Technical Expertise

Safety

EA dedicated Safety Department monitors safety activities during installation and maintenance. We are committed to Corporate Social Responsibility (CSR) by participating in various safety seminars and conducting safety programs for common public and clients on the safe use of elevators and escalators. We also keep our customers involved in safety activities through brochures and manuals.

Modernization

Though regular maintenance keeps elevators in good condition, still all products have their use by date. When elevators are worn out, it not only reduces the systems performance but also affects the reliability and safety. Hence, we offer a range of solutions depending on the condition of the elevator. These include partial to complete system replacements, new cabins, as well as upgrading the cable and control systems. The solution not only offer old elevators a new lease of lift but also make them safe.
